Experience

4/2000 - Present

The Vanguard Group

Valley Forge, PA

Senior Manager, Information Technology Software Development

- For the last 3 years I have been leading my development teams in moving our systems portfolio to the AWS cloud where we are taking advantage of many of the AWS services such as EC2, Serverless Architecture using Lambda and Step Functions, S3, RDS, DynamoDB, SNS, CloudFormation, and SQS.
- Leader of leaders managing the teams that support Vanguard's Fund Financial Services business unit. I have responsibility for the systems teams that manage the Investment Book of Record (IBOR), Securities Lending, Collateral Management, Reconciliation, Investor Cash Management, and the Custodian Money Movement functions.
- Manager responsible for implementing our cloud native CI/CD pipeline in AWS across the entire IT division. In this position, I have the responsibility to transform the entire development process from requirements elicitation to continuous delivery.
- Led the introduction of the MEAN Stack at Vanguard. Thought leader introducing the concept of the full stack JavaScript/Node development team.
- Leader of the firm's "beyond budgeting" effort where I am championing the adoption of a streamlined IT funding process. Leading both senior business and IT executives in adopting this innovative way of planning our work.
- Manager responsible for the global implementation of mutual fund portfolio trade management system across the firm's regional trading sites in Pennsylvania, London, and Melbourne. Managed the teams that built the software allowing the firm's portfolio managers to trade their fund assets 24 hours/day, 6 days/week using the "follow the sun" global trading model.
- Managed the firm's retail brokerage trade management system software and all relationships with global brokerage partners.

Vincent Bloise

- Responsible for managing large software development teams; managing relationships with business clients at the officer level, including technology officers, managing directors, and the chief technology officer.
- Managed multiple vendor relationships, including contract negotiation.
- Led staff that plans, designs, and builds components for all the firm's web sites. Enabled consistent web application experience across firm's web site portfolio through work in this position.

8/1998 – 4/2000

Merrill Lynch

Princeton, NJ

IT Department Manager

- Responsible for large program release planning and systems integration for retail brokerage client intelligence and trading systems.
- Manager of large team of technical and business resources ranging in responsibility from senior designers to software developers.
- Led the development of a five-year software implementation plan to rewrite the retail client management, trading, record keeping, and statements systems for the Private Client group.

7/1987 – 8/1998

IBM

New York, New York

Systems Engineer, Software Consultant/Architect

- Responsible for technical marketing of mainframe hardware and software, software development consulting, system architecture consulting, and management of consulting resources.
- Managed various consulting efforts as part of IBM's Global Services consulting practice.
- Led sales efforts to win large (> \$100 Million) consulting efforts.
- Managed the production of complex proposals for consulting engagement efforts.
- Managed relationships with large New York metropolitan account base.
- Worked in the following industries: financial services, telephony, media, and government.

Education

1984 - 1987

Rutgers University

New Brunswick, NJ

B.A. Computer Science

- Dean's list the final 4 semesters of my studies.
